

Commissioners,

I am a licensed Amateur Radio Operator, and opposed to 03-104.

Currently power distribution systems generate Corona Discharge, EMI, and RFI which cause interference in varying degrees to broadcast communications.

Any proposal to promote greater broadband interference throughout the RF spectrum by running Broadband Powerline Communication/Power Line Communication with disregard for the impact on all existing communications systems (including Broadcast, Federal and Local Government, Emergency and Amateur) should be REJECTED.

Competent research and effort should be directed to non-interference avenues with low to non-negative impact on existing systems.

Sincerely,

Thomas M. Bart K3ESP
